

The Go-To Carbon Block

## CLEANPORE CARBON

Widely used and favoured for drinking water treatment and beverage production where chloramines are not present; the SCB is formulated from low ash content, microporous coconut carbon that targets VOCs and THMs.

Acid wash during the production process and low fine content give excellent rinse-up times as well as regulating pH and taste. The CleanPore Carbon also gives improved flowrate and lower pressure drop than the PCB, reducing the size of the housing required, making it a firm favourite for drinking water, pre-RO and applications where end product consumption is a consideration.

### KEY FEATURES

- Extruded under high pressure, eliminating the need for overuse of binders, increasing flow and dirt holding capabilities
- Highly porous, lightweight, clean and tight microporous structure effective at reducing chlorine, taste and odour contaminants
- Pre-washed, eliminating carbon fines
- 75% minimum free chlorine reduction ensures the CleanPore Carbon's superiority over the ECB

### TYPICAL APPLICATIONS

- Drinking water
- VOC and THM reduction
- RO protection
