

ENVIROL

ENVIROL ORIGINAL

Our **ENVirol™** range is designed for the removal of free, dispersed and emulsified oil from water. Each filter element is manufactured to be highly efficient.

An instant and irreversible bond is formed with the **ENVirol™** media technology as hydrocarbons pass through it.

The **ENVirol™ Original** cartridge will adsorb up to 300% of its own weight and remove 99% of all oils present in a single pass.

Very high flow rates are achievable with **ENVirol™ Original** without any increase in pressure or loss of flow rate.

Benefits of **ENVirol™ Original**

- Exceptional flow rates.
- Adsorption capacity 300% of its own weight.
- 99% removal of all oils in one single pass.
- No pressure differential during process or loss of flow rate.

**Reliable and
simple**

**Removes 99% of
oils in a single
pass**

**ENVirol adsorbs
more than three
times its own
weight**

**No pressure
differential or loss
of flow rate**
